

[illegible]

A box plot showing the distribution of csd for different values of C_p (1, 3, 5, 7, 9, 11, 13, 15, 17, 19, 21). The y-axis is labeled csd and ranges from 0.00000 to 0.00020. The x-axis is labeled C_p . The plot shows that the median csd is relatively stable across different C_p values, around 0.00006. The interquartile range (IQR) is also stable, spanning from approximately 0.00002 to 0.00010. The whiskers extend from approximately 0.00001 to 0.00021. There are no significant differences in the distribution of csd across the different C_p values.
