Box plot showing the distribution of  $csd$  values for different  $C_p$  values (1 to 21). The y-axis represents  $csd$  (ranging from 0.0000 to 0.0015), and the x-axis represents  $C_p$  (ranging from 1 to 21). The plot displays orange box plots with black horizontal lines indicating the median. Dashed vertical lines extend from the top of each box to the maximum value. The median values are relatively stable, around 0.0004, while the maximum values decrease as  $C_p$  increases.
