

[illegible]

Figure 10 is a box plot showing the distribution of the coefficient of determination ( $C_{sd}$ ) for different values of the coefficient of permeability ( $C_p$ ). The x-axis represents  $C_p$  values from 1 to 21, and the y-axis represents  $C_{sd}$  values from 0.000 to 0.012. The plot shows that as  $C_p$  increases, the median  $C_{sd}$  value decreases slightly, and the spread of the data (indicated by the whiskers) also decreases.
