

[illegible]

Figure 10 is a box plot showing the distribution of the coefficient of determination ( $C_{sd}$ ) for different values of  $C_p$  (1, 3, 5, 7, 9, 11, 13, 15, 17, 19, 21). The y-axis is labeled 'csd' and ranges from 0e+00 to 4e-04. The x-axis is labeled 'Cp'. The plot shows that  $C_{sd}$  is relatively stable across different  $C_p$  values, with a slight increase in the median and spread as  $C_p$  increases.
