

[illegible]

Box plot showing the distribution of Cp values (Y-axis, labeled 'csd') for 21 samples (X-axis, labeled 'Cp'). The Y-axis ranges from 0e+00 to 8e-04. The X-axis shows sample numbers 1, 3, 5, 7, 9, 11, 13, 15, 17, 19, 21. Each sample is represented by an orange box plot with a black median line and dashed whiskers. The median values are relatively stable around 2.5e-04, while the whiskers show increasing variability for later samples.
