

[illegible]

A box plot showing the distribution of csd for different values of C_p (1, 3, 5, 7, 9, 11, 13, 15, 17, 19, 21). The y-axis represents csd and ranges from 0.0000 to 0.0015. The x-axis represents C_p . The plot shows that the median csd is relatively stable around 0.0004, while the interquartile range and the range (whiskers) decrease as C_p increases.
