

[illegible]

A box plot showing the distribution of CSD (Coefficient of Skewness Deviation) for different values of C_p (1 to 21). The y-axis represents CSD, ranging from 0e+00 to 1e-03. The x-axis represents C_p . The plot shows that as C_p increases, the median CSD decreases, and the variance (width of the box and length of the whiskers) also decreases, indicating a more stable and less skewed distribution.
