

[illegible]

Box plot showing the distribution of csd values for different C_p values (1, 3, 5, 7, 9, 11, 13, 15, 17, 19, 21). The y-axis represents csd (ranging from 0.00000 to 0.00020), and the x-axis represents C_p . The plot displays the median, quartiles, and range (whiskers) for each C_p value. The distributions are generally stable across the range of C_p values.
