

[illegible]

A box plot showing the distribution of CSD (Coefficient of Skewness Deviation) for different values of Cp (1, 3, 5, 7, 9, 11, 13, 15, 17, 19, 21). The y-axis is labeled 'csd' and ranges from 0.00000 to 0.00015. The x-axis is labeled 'Cp'. The plot shows that the median CSD is approximately 0.00005 for all Cp values, and the interquartile range is relatively stable, around 0.00002. The whiskers extend from approximately 0.00000 to 0.00015, indicating a consistent range of variability across the different Cp values.
