

[illegible]

The box plot displays the distribution of the coefficient of determination (C_{sd}) for various values of the parameter C_p . The x-axis represents C_p with values 1, 3, 5, 7, 9, 11, 13, 15, 17, 19, and 21. The y-axis represents C_{sd} ranging from 0.00000 to 0.00020. Each box plot shows the median (horizontal line within the box), the interquartile range (the box itself), and the range of the data (whiskers extending to the minimum and maximum values). The distributions are very similar across all C_p values, indicating that C_{sd} is not highly sensitive to changes in C_p in this context.
