

[illegible]

Box plot showing the distribution of the coefficient of standard deviation (csd) for different values of  $C_p$  (1 to 21). The y-axis represents csd, ranging from 0.000 to 0.003. The x-axis represents  $C_p$ . The plot shows that the median csd is relatively stable around 0.0008, while the upper whisker (maximum value) decreases as  $C_p$  increases.
