

[illegible]

A box plot showing the distribution of the coefficient of standard deviation (csd) for different values of the parameter C_p (ranging from 1 to 21). The y-axis represents 'csd' and ranges from 0.000 to 0.0035. The x-axis represents ' C_p '. Each box plot shows the median (black horizontal line), the interquartile range (orange box), and the range of the data (dashed whiskers). The median csd decreases as C_p increases, and the spread of the data (whiskers) also decreases.

C_p	Median	Q1	Q3	Min	Max
1	0.00085	0.00030	0.00165	0.00000	0.00350
2	0.00080	0.00028	0.00155	0.00000	0.00330
3	0.00075	0.00026	0.00148	0.00000	0.00315
4	0.00072	0.00025	0.00145	0.00000	0.00305
5	0.00070	0.00024	0.00142	0.00000	0.00295
6	0.00068	0.00023	0.00140	0.00000	0.00285
7	0.00066	0.00022	0.00138	0.00000	0.00275
8	0.00065	0.00021	0.00136	0.00000	0.00265
