

[illegible]

Box plot showing the distribution of csd (Y-axis) for different values of C_p (X-axis, ranging from 1 to 21). The Y-axis ranges from 0.0000 to 0.0020. The plot displays the median (horizontal line within the box), the interquartile range (the box itself), and the range of the data (whiskers) for each C_p value. The median csd is relatively stable around 0.0006, while the upper whisker (maximum value) decreases as C_p increases.
