

[illegible]

Box plot showing the distribution of csd (Y-axis, ranging from 0.000 to 0.008) across different values of C_p (X-axis, ranging from 1 to 21). The plot displays the median (horizontal line within the box), the interquartile range (the box itself), and the range of the data (whiskers) for each C_p value. The median csd is relatively stable around 0.0018, while the spread (IQR and range) decreases as C_p increases.
