

A bar chart showing the variation of the coefficient of variation (C_v) with the coefficient of permeability (C_p). The x-axis represents C_p with values 1, 3, 5, 7, 9, 11, 13, 15, 17, 19, and 21. The y-axis represents C_v with values from 0e+00 to 5e-05. The chart shows that C_v is consistently low, around 0.000002, across all values of C_p .

C_p	C_v
1	0.000002
3	0.000002
5	0.000002
7	0.000002
9	0.000002
11	0.000002
13	0.000002
15	0.000002
17	0.000002
19	0.000002
21	0.000002

A bar chart showing the effect of the parameter C_p on the maximum value of the function. The x-axis is labeled C_p and has values from 1 to 21. The y-axis ranges from $0e+00$ to $6e-05$. The chart displays 21 bars, all of which are approximately $2.8e-05$ high. Each bar has a black outline and is filled with a light orange color. A dashed vertical line is present at each C_p value, extending from the top of the bar to the top of the plot area, which is around $6.5e-05$.

C_p	Maximum Value (approx.)
1	$2.8e-05$
2	$2.8e-05$
3	$2.8e-05$
4	$2.8e-05$
5	$2.8e-05$
6	$2.8e-05$
7	$2.8e-05$
8	$2.8e-05$
9	$2.8e-05$
10	$2.8e-05$
11	$2.8e-05$
12	$2.8e-05$
13	$2.8e-05$
14	$2.8e-05$
15	$2.8e-05$
16	$2.8e-05$
17	$2.8e-05$
18	$2.8e-05$
19	$2.8e-05$
20	$2.8e-05$
21	$2.8e-05$
