

[illegible]

Box plot showing the distribution of the coefficient of standard deviation (csd) for 21 cases. The y-axis represents csd, ranging from 0.000 to 0.015. The x-axis represents Cp, with values from 1 to 21. The median csd is approximately 0.0035 for all cases. The interquartile range (IQR) is relatively constant, around 0.002. The whiskers extend from approximately 0.0005 to 0.0145 for Cp=1, and decrease to approximately 0.0005 to 0.0105 for Cp=21.
