

[illegible]

A box plot showing the distribution of CSD (Covariance Score Difference) for different values of  $C_p$  (ranging from 1 to 21). The y-axis represents CSD, ranging from 0e+00 to 1e-03. The x-axis represents  $C_p$ . The plot shows that as  $C_p$  increases, the median CSD generally decreases, and the variance (represented by the width of the box and the length of the whiskers) also tends to decrease, although there is a slight increase in variance for higher values of  $C_p$  (e.g., 19, 21).
