

[illegible]

A box plot showing the distribution of CSD (Covariance Score Difference) for different values of the variable  $C_p$ . The x-axis is labeled  $C_p$  and has tick marks at 1, 3, 5, 7, 9, 11, 13, 15, 17, 19, and 21. The y-axis is labeled 'csd' and ranges from 0e+00 to 4e-04. The plot consists of 21 orange box plots, one for each integer value of  $C_p$  from 1 to 21. Each box plot shows the median (horizontal line inside the box), the interquartile range (the box itself), and the range of the data (dashed whiskers extending to the minimum and maximum values). The medians are consistently around 1e-04, and the boxes are relatively uniform in size, indicating similar variability across the different  $C_p$  values.
