

[illegible]

Box plot showing the distribution of  $csd$  (Y-axis) for different values of  $C_p$  (X-axis). The Y-axis ranges from  $0e+00$  to  $4e-04$ . The X-axis labels are 1, 3, 5, 7, 9, 11, 13, 15, 17, 19, 21. The plot displays 21 box plots, one for each  $C_p$  value. The median  $csd$  is approximately  $1.1e-04$  for all  $C_p$  values. The interquartile range (IQR) is approximately  $0.5e-04$ . The whiskers extend from approximately  $0.2e-04$  to  $4.2e-04$ . There are no outliers.
