

[illegible]

Box plot showing the distribution of csd (Y-axis, ranging from $0e+00$ to $8e-04$) for different values of C_p (X-axis, ranging from 1 to 21). The median csd is approximately $2.5e-04$ for all C_p values. The interquartile range (IQR) is relatively stable, around $1.5e-04$. The whiskers extend from approximately $1e-04$ to $8.5e-04$. There are no outliers present.
