

[illegible]

Box plot showing the distribution of  $csd$  (Y-axis, ranging from 0.000 to 0.008) across different values of  $C_p$  (X-axis, ranging from 1 to 21). The plot displays the median (horizontal line within the box), the interquartile range (the box itself), and the range of the data (whiskers) for each  $C_p$  value. The median  $csd$  is relatively stable around 0.0018, while the spread (IQR and range) decreases as  $C_p$  increases.
