The chart displays the coefficient of standard deviation (csd) on the y-axis against the coefficient of performance (Cp) on the x-axis. The y-axis ranges from 0.000 to 0.003 with major ticks every 0.001. The x-axis ranges from 1 to 21 with major ticks every 2 units. There are 21 orange bars, each representing a different Cp value. Each bar has a black horizontal line near the bottom, indicating the median csd. Dashed vertical lines extend from the top of each bar to the top of the plot area, showing the range of the data. The csd values generally decrease as Cp increases, starting from approximately 0.0016 at Cp=1 and ending at approximately 0.0011 at Cp=21.
