

[illegible]

A box plot showing the distribution of  $csd$  for different values of  $C_p$  (1, 3, 5, 7, 9, 11, 13, 15, 17, 19, 21). The y-axis is labeled  $csd$  and ranges from  $0e+00$  to  $6e-04$ . The x-axis is labeled  $C_p$ . The plot shows that the median  $csd$  is relatively stable across different  $C_p$  values, while the variance (indicated by the length of the boxes and whiskers) decreases as  $C_p$  increases.
