A box plot showing the distribution of  $csd$  for different values of  $C_p$  (1, 3, 5, 7, 9, 11, 13, 15, 17, 19, 21). The y-axis represents  $csd$  and ranges from 0.000 to 0.003. The x-axis represents  $C_p$ . The plot shows that as  $C_p$  increases, the median  $csd$  decreases slightly, and the spread (interquartile range and whiskers) also decreases.
