

[illegible]

Box plot showing the distribution of csd (Y-axis) across different values of C_p (X-axis, ranging from 1 to 21). The Y-axis ranges from $0e+00$ to $6e-04$. The plot displays the median, quartiles, and range (whiskers) for each C_p value. The distributions are generally stable, with medians clustered around $1.8e-04$ and upper whiskers extending towards $6e-04$.
