A box plot showing the distribution of CSD (Covariance Score Difference) for different values of  $C_p$  (1, 3, 5, 7, 9, 11, 13, 15, 17, 19, 21). The y-axis is labeled 'csd' and ranges from 0.00000 to 0.00015. The x-axis is labeled 'Cp'. The plot shows that the median CSD is approximately 0.00004 for all values of  $C_p$ , and the interquartile range is relatively stable, indicating that the CSD is not significantly affected by the choice of  $C_p$ .
