

[illegible]

Box plot showing the distribution of the coefficient of standard deviation (csd) for different values of C_p (1, 3, 5, 7, 9, 11, 13, 15, 17, 19, 21). The y-axis represents csd, ranging from 0.0000 to 0.0015. The plot shows that the median csd is relatively stable around 0.0003, while the interquartile range and whiskers decrease as C_p increases.
