

[illegible]

Box plot showing the distribution of csd (Y-axis, ranging from 0.000 to 0.003) across different values of C_p (X-axis, ranging from 1 to 21). The plot displays the median (black horizontal line), the interquartile range (orange box), and the range (dashed whiskers) for each C_p value. The median csd is relatively stable around 0.0008, while the range of csd values decreases as C_p increases.
